Plan for Iteration 2:

Before jumping into the coding part of the application, we will wait until we receive feedback on 2 Full Use-Case Descriptions and Domain model.

- If need be, we will make revised version of these 2 Full Use Case Descriptions and the Domain model.
- At the same time, we will make 2 new Fully Dressed Use Case Descriptions and they will be chosen from the 5 Brief use case Descriptions submitted with Iteration 1.
- We will make 2 sequence diagrams
- Making full class diagrams that will include the classes for each functionality
- As soon as we get our designing part done, we will start on coding the basic version of the application that will have all the must-have features

  Moreover,
- We barely had any physical group meeting during Iteration 1. The responsibilities for each were split through discussion in a group chat on a social media platform. While, we will continue taking the advantage of internet-based group meeting, we plan on physically meeting at least 1 each week so can discuss our issues face-to-face and can help each other solve the problems as soon as possible. We do realize that there's no alternative to physical meeting when it comes to coding part of the project.
